

The failing job was caused by a syntax error in `recordes-mundiais-site.tsx` at line 23: the property `detentor` is not closed properly. The line:

TSX

`detentor: 'Sultan Köse`

is missing the closing single quote and comma. To fix this, update the entry as follows:

TSX

`detentor: 'Sultan Köse',`

You can view the relevant code here: `recordes-mundiais-site.tsx` (ref: `ef648317f9128d521f6037c0e988c38d037e7840`).

This correction will resolve the "Unexpected eof" error and allow the lint job to complete successfully.
